DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-12, 14 and 17-24 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Seppinen et al., US Patent 6,833,769.

Regarding claims 1, 3, 4, 8, 9, 12, 14, 19, 20, 23 and 24, Seppinen et al. discloses in figures 3-10 a VCO (see Figure 3) comprising: an oscillating circuit (154 and 200); and an active circuit (158), where the oscillating circuit includes an inductive circuit (154) and a capacitive circuit (200). The capacitive circuit (Figure 4) includes three branches connected in parallel, each has a first half (244, 212), a center terminal (Vt), and a second half (212, 242), the adjustable control voltage (Vt), each of the circuit branches is biased by a different biasing voltage (by voltage dividers (left and right resistors, 222, 224, 230, 232, 238, 240, 246, 248). The circuit branches are controlled by a common control voltage (Vt) and the varactors of each branch are biased by different biasing voltages (each node has divided voltage).

Regarding claim 5, Figure 9 shows a different number of capacitive elements (by switching)

Regarding claims 6, 7, 17, 18, Figure 9 shows MOS varactors.

Regarding claims 10, 11, 21, 22 Figure 9 shows decoupling capacitors (244, 236, 228, 242, 234, 226 at outmost terminals 233 and 235)

Response to Arguments

Applicant's arguments with respect to claim 1, 3-12, 14, and 17-24 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment (including new claim 15) necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
